

Abstract

Attraction consisting of a number of gondolas arranged a fixed distance apart which move along a fixed endless track, such as a circle. By a difference in height of at least approximately 30 metres is traveled. The gondolas are linked to one another in such a way that the distance between them remains constant and are guided along a track by a roller construction. Driving takes place with the aid of a drive cable and with the aid of a supporting platform that can turn with respect to the gondolas it is ensured that the users are always in the same position.
